 Perth

What are the key considerations when determining what extent of detail to model to?	
When Revit draws walls in which order does it clean the layers. Layers designated "Structure [1]" first... or layers designated "Finish 2 [5]"?	
What type of wall, "stacked" or "compound", is comprised of two or more "basic walls" sitting on top of each other?	
Can a railing be used to create other building elements besides railings? If so provide an example.	
List some of Revit's current limitations with respect to modelling.	
Which Revit modelling elements does the "shape editing" tools apply to?	
What should you use when creating families to constrain the geometry?	
Briefly discuss how you might utilise the massing tool to benefit the work of your practice.
